Kovsie Assets Tracker - Complete System Flow

This document summarizes the full system workflow for the Kovsie Assets Tracker system. It covers the web and Android integration, user access process, and the asset verification cycle managed through the ASP.NET Web API backend.

Icon	Process	Summary
■	User Sign Up	New employee requests access using the web form.
■■■	Admin Approval	Administrator reviews, approves or declines access request.
■■	Account Creation	System automatically creates user profile with assigned role.
■	Staff Login (Android)	Staff member logs in using Android App with valid credentials.
■	Asset Management	Staff manages assets: create, scan, upload or generate QR codes.
■■	API Processing	ASP.NET Web API handles data, logic, and QR generation automatically.
■	Verification & Reports	Verification agent ensures data accuracy and generates reports.

■ **Tech Stack:** ASP.NET Web API | ASP.NET MVC | Android (Java) | SQL Server | ZXing | QRCoder
